

**Global Technology**  
Empowering the Future

## Who We Are

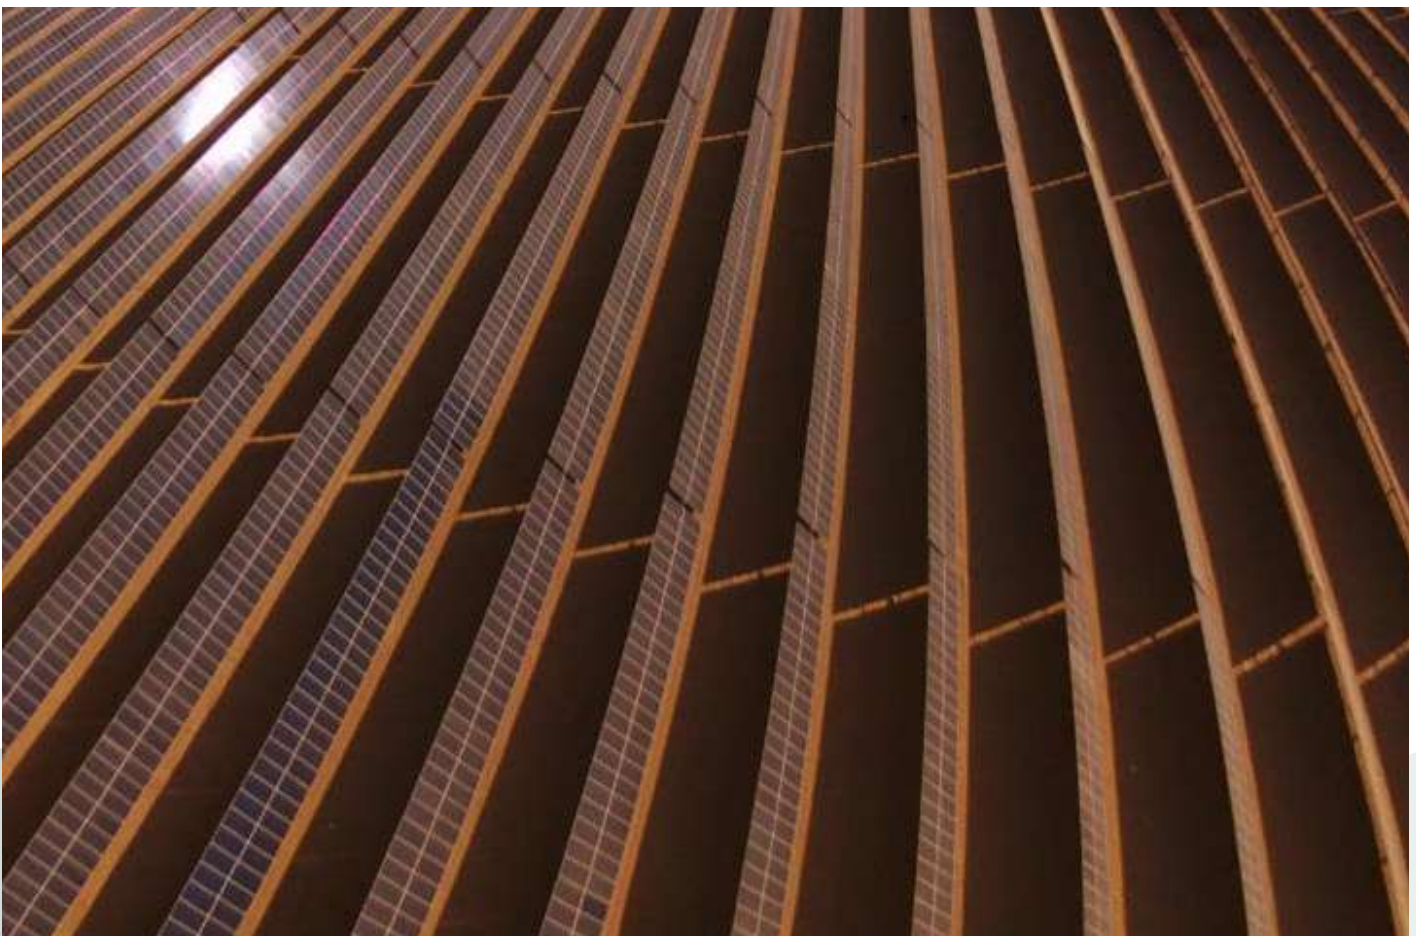

---

GLOBAL TECHNOLOGY S.R.L was founded in 2011 and has substantial experience in the electrical, industrial, solar, and naval fields,

GLOBAL TECHNOLOGY has more than 700 employees, 100 of whom are specialized technicians. With such a large number of carefully chosen specialists, staff members, and the implementation of the Continual Improvement strategy, high performance and the best professional outcomes are assured

As a result, the business is a pioneer in the installation and upkeep of industrial-scale solar systems.

The company, which has offices on three continents, concentrates exclusively on the field of renewable energy, including the design, construction, and management of solar power facilities. We have already put in place power plants that can generate more than 2.5 gigawatt of energy.

# Our Vision

---

In the area of solar energy, our company's objective is to take the lead in environmental sustainability and renewable energy.

By promoting solar energy as a primary source of electricity, we hope to bring about a positive transformation in the energy industry.

We work strenuously to provide individuals, businesses, and institutions all around the world advanced and affordable solar energy solutions. We wish to contribute to the transition of the globe to a sustainable energy system that primarily utilizes renewable resources and safeguards the environment.

We work to increase public understanding of solar energy's advantages and inspire communities and governments to take action in the direction of a more ecologically friendly and sustainable way of life.

# Our Mission

---

Providing and promoting the use of renewable and sustainable energy is our goal in the field of solar energy, as we believe it's the way to advance both economic and environmental growth.

We work to increase public understanding of solar energy's advantages and inspire communities and governments to take action in the direction of a more ecologically friendly and sustainable way of life.

We work tirelessly to offer our clients cutting-edge and dependable solar energy solutions that satisfy their immediate requirements and bring about long-lasting advantages to the communities we serve.

Our goal is to improve environmental sustainability and lessen dependency on conventional energy sources by promoting the use of solar cells, storage devices, and intelligent routing.

We also strive to continuously improve our team's abilities and skills so as to support our company in meeting its objectives as well as our staff's professional successes.

## What we do

---

Engineering Studies

Engineering designs

Electrical Work Installations

Mechanical Work Installations

Civil Works

Operation and Maintenance Management

Project Management Plans
